Chapter 2: Life Processes in Living Organisms – Part 1

Q1. What are life processes? Name any four life processes.

Q2. Explain how living organisms produce energy. Write the significance of energy production.

Q3. Explain aerobic respiration with the help of a balanced chemical equation.

Q4. Explain anaerobic respiration with suitable examples.

Q5. Energy is obtained from different food components. Explain the role of carbohydrates, fats and proteins as energy sources.

Q6. What is cell division? State its importance.

Q7. Explain mitosis and write the main steps of mitosis.

Q8. What is meiosis? State its importance.

Q9. Explain meiosis I and meiosis II briefly.

Q10. Distinguish between mitosis and meiosis (any four points).
